THE NONARCHIMEDEAN SCOTTISH BOOK

KIRAN S. KEDLAYA

The original Scottish Book was a compilation of problems, primarily concerning functional analysis, assembled at the Scottish Cafe in Lvov during the 1930s and 1940s. In the same spirit, this document is a collaborative compilation of problems concerning nonarchimedean functional analysis and related topics, including analytic geometry (especially adic spaces) and perfectoid rings, fields, and spaces.

This document is hosted on SageMathCloud. To acquire edit access, create an account on SMC and then contact an existing author to be added as a collaborator.
