

# SageMathCloud: realtime collaborative web-based technical computation

William Stein

February 6, 2017

- 1 Background
- 2 Tour

# Who Am I?

- 1 1995–now: Number theorist (Berkeley Ph.D.; Harvard Asst. Prof.)
- 2 2004–now: Founder of SageMath
- 3 2005–now: Prof at UCSD, then Univ of Washington (on unpaid leave)
- 4 2015–now: CEO of SageMath, Inc. (current fulltime job)

# 2012: I Started SMC - why?

- 1 Frustration with funding for Sage after Simons Foundation meeting
- 2 Need to make Sage easily available to the masses
- 3 SMC: next generation successor to sagenb
- 4 Taught course on Sage/LaTeX/etc. *many* times, and wanted ideal environment.
- 5 Spent a year learning web development, scalable distributed systems, building prototypes, mastering new programming languages, etc. (just like with Sage), before I had anything.
- 6 Key inspiration: bought Chromebook – decided to **dogfood!**

# What is SMC?

- 1 Sandboxed collaborative browser-based “projects” (=Linux accounts).
- 2  $\text{\LaTeX}$ , Sage, Jupyter, Terminals, Chat, File editing, etc., all with full history tracking, collaboration, and chat.
- 3 SMC entirely written inside SMC!
- 4 **Longterm Goal:** *Create the canonical platform for realtime collaborative web-based technical computing.*
- 5 SMC directly competes with...? Some products do technical computing, but not realtime collaboration (e.g., JupyterHub, Wolfram Cloud, JuliaBox), and others do realtime collaboration but not technical computing (e.g., Cloud9.io IDE, Codenvy).

- 1 **Feb 2015:** SageMath, Inc. – a Delaware C Corp
  - Founded with outside angel investment
  - Need an entity from which people can “buy support”
  - For SMC to be *viable* for millions of users, we absolutely need 50+ people doing support, operations, and dev; a private company is a viable way to build such a thing.
- 2 **June 2016:** Start working fulltime for SageMath, Inc.; additional outside investment.
- 3 **Jan 2017:** SMC is a powerful collaborative browser-based environment optimized for technical computation.
- 4 **SMI employees:** me, Harald Schilly, John Jeng, Hal Snyder and Tim Clemans.

- 1 Build a major company during the next five years.
- 2 Company will eventually fund work on open source math software.
- 3 Current market focus:

## **Professors teaching STEM courses using open source software**

- 4 Priority:  $\text{\LaTeX}$  editing, course management, quality of service.
- 5 Our focus is *not* on: companies, supported private installs, data science, being an application platform, etc...

# Tour

# Demo: Setup

- 1 Be signed in under two accounts in two browsers
- 2 Create project
- 3 Add/remove other user as collaborator

## Projects

Deleted Hidden

Search for projects...

Create new project...

## Settings and configuration

### H Title and description

Title: Support and Testing

Description: #active misc support-related questions #dev #me #star #smc #support

### Project usage and quotas

Adjust your quotas...

Member hosting: Yes

- 1 upgrade given by free project

Internet access: Yes

- 1 upgrade given by free project

Idle timeout: 174 hours of non-interactive use before project stops

### Collaborators

Collaborators can modify anything in this project, except they can add and remove other collaborators, but cannot owners.

Add collaborators: Search by name or email address

- William Stein (14 minutes ago) (owner)
- Hal Snyder (1 week ago) (collaborator)
- WILLIAM (TEST USER) Stein (3 months ago) (collaborator)
- Harald Schilly (4 months ago) (collaborator)

Bharathwaj Palvannan last seen at  
Notes on Iwasawa theory

# Demo: Sage Worksheet

- 1 Evaluate some examples, including graphics
- 2 TimeTravel history, changes diff.
- 3 Cut/paste to another worksheet (including graphics)
- 4 Split screen
- 5 Print
- 6 Explain line numbers on the left
- 7 Code folding
- 8 Modes: time, md, html, latex (include sagetex), r, octave, cython
- 9 Show `jupyter('...')`
- 10 Show how to make your own new % mode.
- 11 Side chat
- 12 Multiple cursors
- 13 Editor settings: color themes, font size, keybindings

# Demo: L<sup>A</sup>T<sub>E</sub>X Document

- 1 Make a folder, then latex file in folder
- 2 Change title and author
- 3 Put in some random paragraphs and illustrate forward/inverse search.
- 4 SageTeX
- 5 Illustrate error handling (on right; on left with error hover)
- 6 Split display
- 7 All panels are resizable (chat, etc.)
- 8 Customize: build command, preview resolution

This year's elliptic curve:

Mistake: 2

## 2 What Next?

# Demo: Terminal

- 1 Create a terminal: ls, top, etc. – it's Linux.
- 2 Run vim and emacs on our tex file from above (see saved changes update browser view)
- 3 Use the terminal from other browser (and see sync)
- 4 Run sage
- 5 Side chat
- 6 Close/open preserves session

# Demo: Jupyter Notebook

- 1 Create notebook and do a simple computation
- 2 Switch to Sage kernel and draw a plot
- 3 Some markdown text
- 4 Illustrate that sync works, with multiple cursors
- 5 TimeTravel
- 6 Other kernels, e.g., R?
- 7 Mention how we handle issues with large graphics
- 8 The vanilla Jupyter server:

`https://cloud.sagemath.com/[project_id]/port/jupyter/`

The image displays two overlapping JupyterLab windows from SageMathCloud. Both windows show the same code: `E = EllipticCurve('2017a'); E` and `plot(E)`. The left window shows the output: "Elliptic Curve defined by  $y^2 + xy = x^3 + x^2 - 10x + 9$ " and a plot of this curve. The right window shows the output: "Elliptic Curve defined by  $y^2 + xy = x^3 + x^2 - 10x + 9$  over  $\mathbb{Q}$ " and a plot of the same curve. A blue arrow points from the plot in the right window to the plot in the left window. The interface includes a top navigation bar with "Files", "New", "Log", "Find", "Settings", "TimeTravel", "Publish", "About", and "Refresh". The bottom of the interface shows a "TimeTravel" slider and a "Revert live version to this" button.

# Demo: Course Management

- 1 Create a new course
- 2 Add user as a student
- 3 Create an assignment
- 4 Push out
- 5 Edit in the student's project
- 6 Collect
- 7 Grade
- 8 Return

Find students...

Add student by name or email address...

First Name	Last Name	Student Email	Last Active	Hosting Type
wstein+student@gmail.com	(invited)	wstein+student@gmail.com	(has never used project)	Free

Open student project

Delete...

Assignment	1. Assign to Student	2. Collect from Student	3. Grade	4. Return to Student
tmp/Assignment 1	Assign... (less than a minute ago)	Collect		
Notes	Edit			

@TA - can't... you fix this...?

Type a message. ...

Shift+enter to send. Double click to edit. Use Markdown and LaTeX.

# Demo: Chatrooms

- 1 Create a chatroom
- 2 Type a message and see notification
- 3 Put some math in a message
- 4 Edit a past message
- 5 Use vim in a terminal to show the file format.

18: I would remove this "Use vim in a terminal to show the file format" ... that goes into too much detail and I fear you might get lost in some details 😊 16 minutes ago

I think you don't realize how highly technical this audience is. 14 minutes ago

Harald Schilly  
slide 21: maybe the title is wrong? It says "File Manager", but we already were there? Demo "Backup" ?  
"Text search (grep)" is definitely a duplicate.  
Last edit 13 minutes ago by Harald Schilly Edited

And it's not a scientific computing audience. 13 minutes ago

Harald Schilly  
ok 😊 13 minutes ago

They aren't scientific computing people either. 13 minutes ago

Maybe refresh – I fixed the duplicate stuff already... 12 minutes ago

# Demo: Markdown and HTML Editors

- 1 Create a .md file
- 2 Type some things see realtime preview
- 3 Include math and see it in output
- 4 Bar at the top with snippets
- 5 Links/images work properly
- 6 Same for HTML
- 7 Show tag matching
- 8 Click on right to get position on left in HTML.

```

1 # This is a Markdown File
2
3 ## Introduction
4
5 - There is a preview to the right
6
7 - You can typeset math:  $y^2 = x^3 + \alpha x + \beta$ 
8
9
10 ## A folded section↕
14 ## Each section can be folded and expanded
15
16 - Another section here
17
18 - You can embed images: <img width=300 src='a.png'>
19
20 - And you can link to files(2017-02-06-074526.sagews)
    
```

Preview

# This is a Markdown File

# Demo: Coding in Python

- 1 Create a .py file
- 2 Define a function
- 3 Attach to a Sage worksheet
- 4 Make changes and evaluate
- 5 Also import in a terminal
- 6 And in that Jupyter notebook

The image shows a web browser interface for editing a Python file on SageMathCloud. The code in the editor is as follows:

```
1 # My Python library
2
3 import sage.all as sage
4
5 def cool_facts(year):
6     """
7     This is a docstring....
8     """
9     print "Prime? ", sage.is_prime(year)
10    print "Number of primes: ", sage.primepi(year)
11    print "Sum of digits:", sage.sum_digits(year)
12    if not sage.is_prime(year):
13        print "Factors", sage.factorint(year)
14
15 def another_function(n):
16    return n+1
```

The terminal window shows the following output:

```
~/tmp$ sage
SageMath version 7.5, Release Date: 2017-01-11
Enhanced for SageMathCloud.

sage: import cool_code
sage: cool_code.cool_facts(2017)
Prime? True
Number of primes: 306
Sum of digits: 10
sage: 
```

A blue notification box in the top right corner of the editor says: "SMC is a great place to write Python code. 2 minutes..."

# Demo: File Manager

- 1 Navigating and finding files
- 2 Creating files
- 3 Operations with files
- 4 Snapshots (the "Backups" button)
- 5 Log of project activities
- 6 Text search (grep)
